ESM-240SxxxDx

Rev.B

Features

- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) with Programmability
- Isolated 1-10V/10V PWM/3-Timer-Modes Dimmable
- Output Lumen Compensation
- End-of-Life Indicator
- Input Surge Protection: DM 6kV, CM 10kV
- All-Around Protection: OVP, SCP, OTP
- IP66 / IP67 and UL Dry / Damp / Wet Location
- TYPE HL, for use in a Class I, Division 2 hazardous (Classified) location
- 5 Years Warranty

Description

₩ C E CB FAI 🗇

The *ESM-240SxxxDx* series is a 240W, constant-current, programmable and IP66/IP67 rated LED driver that operates from 249-528Vac input with excellent power factor. It is created for many lighting applications including high bay, high mast and roadway, etc. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, output over voltage, short circuit, and over temperature.

Models

Adjustable Output	Output Full-Power		Input Voltage			Max. Typical Output Efficiency	Typical Power Factor		Model Number
Current Range	Range(1)	Output Current	Range(2)	Range	Power	(3)		480Vac	(5)
70-1050mA	700-1050mA		249~528 Vac/ 352~500 Vdc			94.5%	0.99	0.95	ESM-240S105Dx
105-1500mA	1050-1500mA	1050 mA	249~528 Vac/ 352~500 Vdc	80~229 Vdc	240 W	94.0%	0.99	0.95	ESM-240S150Dx
215-3500mA	2150-3500mA	2150 mA	249~528 Vac/ 352~500 Vdc	35~111 Vdc	240 W	94.0%	0.99	0.95	ESM-240S350Dx ⁽⁴⁾
420-6700mA	4200-6700mA	4900 mA	249~528 Vac/ 352~500 Vdc	18 ~ 57 Vdc	240 W	93.0%	0.99	0.95	ESM-240S670Dx ⁽⁴⁾

Notes: (1) Output current range with constant power at 240W

(2) Certified input voltage range: 277-480Vac.

(3) Measured at 100%load and 480Vac input (see below "General Specifications" for details).

(4) SELV output.

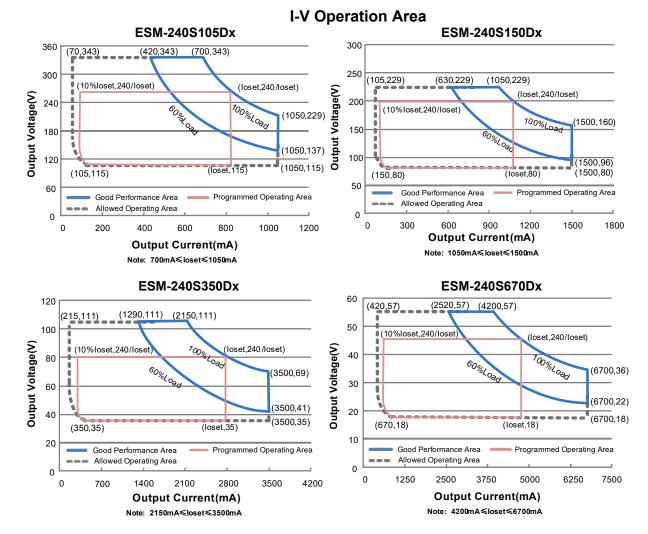

(5) x = G are UL Recognized and ENEC, etc. models; x = T are UL Class P models.

Protection Functions

Parameter	Notes				
Over Voltage Protection	Limits output voltage at no load and in case the normal voltage limit fails.				
Short Circuit Protection	Auto Recovery. No damage will occur when any output is short circuited. The output shall return to normal when the fault condition is removed.				
Over Temperature Protection	Decreases output current, returning to normal after over temperature is removed.				

Dimming

• 1-10V Dimming

The recommended implementation of the dimming control is provided below.

Implementation 2: Negative logic

Notes:

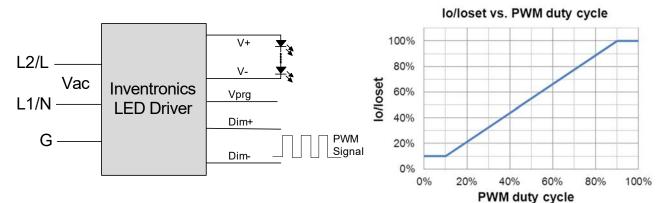

- 1. The dimmer can also be replaced by an active 1-10V voltage source signal or passive components like zener.
- 2. If 1-10V dimming is not used, Dim + should be open.
- 3. When 1-10V negative logic dimming mode and Dim+ is open, the driver will output minimum current.

ESM-240SxxxDx

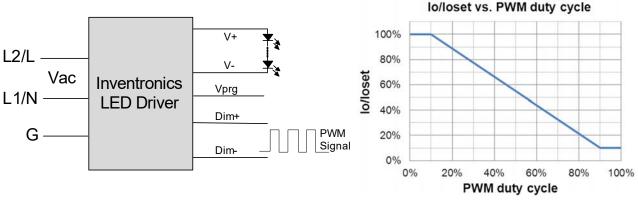

Rev.B

10V PWM Dimming

The recommended implementation of the dimming control is provided below.

Implementation 3: Positive logic

Implementation 4: Negative logic

Notes:

- 1. If PWM dimming is not used, Dim + should be open.
- 2. When PWM negative logic dimming mode and Dim+ is open, the driver will output minimum current.

• Time Dimming

Time dimming control includes 3 kinds of modes, they are Self Adapting-Midnight, Self Adapting-Percentage and Traditional Timer.

- Self Adapting-Midnight: Automatically adjusts the dimming curve based on the on-time of past two days (if difference <15 minutes), assuming that the center point of the dimming curve is midnight local time.
- Self Adapting-Percentage: Automatically adjusts the on-time of each step by a constant percentage = (actual on-time for the past 2 days if difference <15 min) / (programmed on-time from the dimming curve).
- Traditional Timer: Follows the programmed timing curve after power on with no changes.

• Output Lumen Compensation

Output Lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

10/14

ESM-240SxxxDx

Rev.B

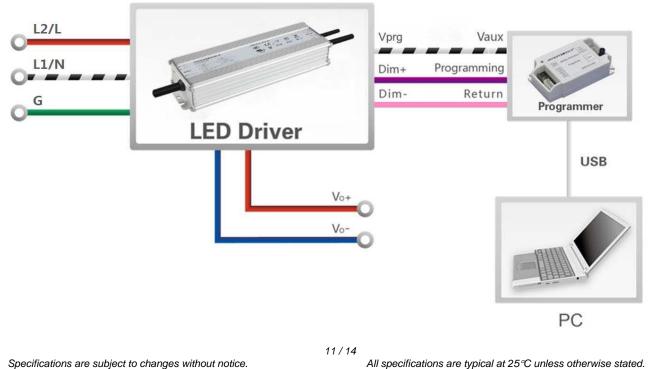

• End Of Life

End-of-Life (EOL) is providing a visual notification to a user that the LED module has reached the end of manufacturer-specified life and that the replacement is recommended. Once active, an indication is given at each power-up of the driver, which the driver indicates this through a lower light output during the first 1 minute before normal operation is continued.
