

## RX7s Lampholders for hot restart

**Type: 30620**

**Item number: 100741**

Enclosed lampholder for discharge lamps with base RX7s

Contact pin: Ni

Lead: Si-insulation with spun glass filler 7 mm dia. max. 180 °C, for ignition voltage max. 35 kV (for immediate hot restart)

|                                   |                                           |
|-----------------------------------|-------------------------------------------|
| Lamp base:                        | RX7s                                      |
| Material:                         | Ceramic                                   |
| Colour:                           | Nature                                    |
| Fixing:                           | Fixing holes M4                           |
| Connection:                       | With cable                                |
| Lead length [mm]:                 | 1000                                      |
| Lead diameter [mm <sup>2</sup> ]: | 1,00                                      |
| Conductor material:               | Cu tinned                                 |
| Lead quality:                     | Silicon-insulation with spun glass filler |
| Lead end:                         | Ferrule on bare end of core               |
| Lead rating Max.:                 | 180                                       |
| Insulation colour:                | Black                                     |
| Nominal rating:                   | 10/1000                                   |
| T-Marking:                        | 250                                       |
| Distance of contacts [mm]:        | Single lampholder                         |
