

Wall Switch

Ideally suited for On and Off control of small and medium spaces, GE Aware™ Wall Switch Sensors are designed to replace a standard wall switch to provide enhanced automatic switching based on occupant motion. Wall switches are best for spaces free from obstructions of the line of sight from switch location, room orientation or furniture placement. For areas up to 1,000 square feet.

Applications:

Individual offices, restrooms and break rooms.

GE Aware Wall Switch Sensors are available with the following features:

- Infrared and Dual Tech sensing
- Line voltage (directly replaces wall switch) or low voltage (for switchpacks or GE LightSweep™)
- Single or dual relay
- Photocell capability
- Five colors available: white, ivory, light almond, gray, black

High-Bay Fixture Mount

The GE Aware™ high-bay series of occupancy sensors is specifically designed for high ceiling applications including warehouses, distribution centers and much more.

With well-developed PIR sensor technology and circuit design, these sensors are the perfect combination of high sensitivity and low false-trip occurrence. Options include 360-degree high-bay (up to 40 ft) and low-bay (up to 25 ft) lenses, and shields for end-of-aisle use. Installation is easy – just mount it directly on to any fluorescent fixture.

Applications:

Commercial and industrial high-bay fixtures.

GE Aware High-Bay Fixture Mount Sensors are available with the following features:

- Fixture mount
- Passive Infrared
- Line voltage (120–277V) [347–480V version coming soon]
- Single and dual relay options
- Optional photocell
- Low-temperature version coming soon
